On Reasoning and Argument David Hitchcock 2017-04-06 This book brings together in one place David Hitchcock's most significant published articles on reasoning and argument. In seven new chapters he updates his thinking in the light of subsequent scholarship. Collectively, the papers articulate a distinctive position in the philosophy of argumentation. Among other things, the author: • develops an account of "material consequence" that permits evaluation of inferences without problematic postulation of unstated premises. • updates his recursive definition of argument that accommodates chaining and embedding of arguments and allows any type of illocutionary act to be a conclusion. • advances a general theory of relevance. • provides comprehensive frameworks for evaluating inferences in reasoning by analogy, means-end reasoning, and appeals to considerations or criteria. • argues that none of the forms of arguing ad hominem is a fallacy. • describes proven methods of teaching critical thinking effectively.

It offers thorough treatments of Toulmin-based and Rogerian approaches to argument as well as teaches the value of fully understanding the opposition, the importance of aiming for the middle ground, and how to use a microhistory to forge an unconventional position. Systematic Approaches to Argument by Analogy Henrique Jales Ribeiro 2014-07-09 The present volume assembles a relevant set of studies of argument by analogy, which address this topic in a systematic fashion, either from an essentially theoretical perspective or from the perspective of it being applied to different fields like politics, linguistics, literature, law, medicine, science in general and philosophy. All result from original research conducted by their authors for this publication. Thus, broadly speaking, this is an exception which we find worthy of occupying a special place in the sphere of the bibliography on the argument by analogy. In effect, most of the contexts of the publications on this topic focus on specific areas, for example everyday discourse, science or law theory, while underestimating or sometimes even ignoring other interdisciplinary scopes, as is the case of literature, medicine or philosophy. The idiosyncrasy of this volume is that the reader and the researcher may follow the development of different theoretical outlooks on argument by analogy, while measuring the scope of its (greater or lesser) application to the aforementioned areas as a whole.

Ethics in Nursing Martin Benjamin 2010 Starting with detailed cases based on real life, the fourth edition of Ethics in Nursing introduces the principles, concepts, and reasoning needed to think them through. Changes in this edition reflect important developments in nursing, ethical theory, and nursing ethics. Among the expanded set of 64 cases, 22 have been significantly revised and 15 are entirely new. Reasoning skills and philosophical understanding are explained and illustrated in cases involving: nurses and clients; inter-professional relationships; personal responsibility for institutional and public policy; and cost containment, justice, and rationing. New material on ethical theory includes an illustrated explanation and defense of moral pluralism, a section on the ethics of care, and an expanded discussion of reflective equilibrium as a method of ethical reasoning. New topics include pandemics and care for SARS patients, elderly patients contemplating suicide, and workplace violence. As with previous editions, both the nursing and philosophical content are

self-contained, making the book accessible to readers with little or no background in either. Ethics in Nursing provides practicing and student nurses with a useful introduction to the identification and analysis of ethical issues that reflects both the special perspective of nursing and the value of systematic philosophical inquiry.

Rigour and Reason: Essays in Honour of Hans Vilhelm Hansen J. Anthony Blair 2020-06-11 Built in the centre of Copenhagen, and noted for its equestrian stairway, the Rundetaarn (Round Tower), was intended as an astronomical observatory. Part of a complex of buildings that once included a university library, it affords expansive views of the city in every direction, towering above what surrounds it. The metaphor of the towering figure, who sees what others might not, whose vantage point allows him to visualize how things fit together, and who has an earned stature of respect and authority, fits another Danish stalwart, Hans Vilhelm Hansen, whose contributions to the fields of informal logic and argument theory have earned the gratitude of his colleagues, and inspired this collection of essays, written to express the appreciation of its authors and of the many, many colleagues they represent.

Topical Themes in Argumentation Theory Frans H. van Eemeren 2012-05-05 Topical Themes in Argumentation Theory brings together twenty exploratory studies on important subjects of research in contemporary argumentation theory. The essays are based on papers that were presented at the 7th Conference of the International Society for the Study of Argumentation (ISSA) in Amsterdam in June 2010. They give an impression of the nature and the variety of the kind of research that has recently been carried out in the study of argumentation. The volume starts with three essays that provide stimulating theoretical perspectives on argumentation. Subsequently, some views are explained on the intriguing topics of 'dissensus' and 'deep disagreement'. After a discussion of three different approaches to the treatment of types of argumentation some classical themes from antique argumentation theory are revisited. The new research area of visual argumentation is explored in the next part. The volume concludes with three reports of experimental studies concerning argumentative discourse. Argumentation in Everyday Life Jeffrey P. Mehlretter Drury 2019-01-21 "Good coverage of concepts with understandable explanations of theory. Very user friendly with exercises to use in and out of class. Connects well with other communication classes through the application of other communication concepts to argumentation." —Christopher Leland, Azusa Pacific University Argumentation in Everyday Life provides students with the tools they need to argue effectively in the classroom and beyond. Jeffrey P. Mehlretter Drury offers rich coverage of theory while balancing everyday applicability, allowing students to use their skills soundly. Drury introduces the fundamentals of constructing and refuting arguments using the Toulmin model and ARG conditions (Acceptability, Relevance, and Grounds). Numerous real-world examples are connected to the theories of rhetoric and argumentation discussed—enabling students to practice and apply the content in personal, civic, and professional contexts, as well as traditional academic debates. Encouraging self-reflection, this book empowers students to find their voice and create positive change through argumentation in everyday life. Unique resources to help students navigate this complex terrain of argumentation: "The Debate Situation" offers students a birds-eye view of any given debate (or exchange of arguments between two or more people) organized around three necessary components: arguments, issues, and the proposition. The visual model of the debate situation illustrates how these features work together in guiding a debate and it lays the groundwork for understanding and generating arguments. Easy to Use Standards for Evaluating Arguments combine a prominent argument model (named after logician Stephen Toulmin) with a standards-based approach (the ARG conditions) to test of quality of an argument. The ARG conditions are three questions an advocate should ask of an argument in determining whether or not it is rationally persuasive. These questions are best served by research but don't necessarily require it, and thus they provide a useful posture for critically assessing the arguments you encounter. Multiple "Everyday Life" examples with an emphasis on context help students to connect the lessons more fully to their everyday life and encourages them to grapple explicitly with dilemmas arising in different contexts. "Find Your Voice Prompts" focus on choice & empowerment to offer strategies for students to choose which arguments to address and how to address them—empowering students to use argumentation to find their voice. "Build Your Skill Prompts" use objective applications to test how well students have learned the information. They offer a chance to apply the material to additional examples that students can check against the answers in Appendix II. Two application exercises at the end of each chapter encourage students to think critically about the content, discuss their thoughts with their peers, and apply the material to everyday situations.

The Uses of Argument Stephen E. Toulmin 2003-07-07 A central theme throughout the impressive series of philosophical books and articles Stephen Toulmin has published since 1948 is the way in which assertions and opinions concerning all sorts of topics, brought up in everyday life or in academic research, can be rationally justified. Is there one universal system of norms, by which all sorts of arguments in all sorts of fields must be judged, or must each sort of argument be judged according to its own norms? In *The Uses of Argument* (1958) Toulmin sets out his views on these questions for the first time. In spite of initial criticisms from logicians and fellow philosophers, *The Uses of Argument* has been an enduring source of inspiration and discussion to students of argumentation from all kinds of disciplinary background for more than forty years.

Rhetorical Citizenship and Public Deliberation Christian Kock 2015-06-29 Citizenship has long been a central topic among educators, philosophers, and political theorists. Using the phrase "rhetorical citizenship" as a unifying perspective, *Rhetorical Citizenship and Public Deliberation* aims to develop an understanding of citizenship as a discursive phenomenon, arguing that discourse is not prefatory to real action but in many ways constitutive of civic engagement. To accomplish this, the book brings together, in a cross-disciplinary effort, contributions by scholars in fields that rarely intersect. For the most part, discussions of citizenship have focused on aspects that are central to the "liberal" tradition of social thought—that is, questions of the freedoms and rights of citizens and groups. This collection gives voice to a

“republican” conception of citizenship. Seeing participation and debate as central to being a citizen, this tradition looks back to the Greek city-states and republican Rome. Citizenship, in this sense of the word, is rhetorical citizenship. Rhetoric is thus at the core of being a citizen. Aside from the editors, the contributors are John Adams, Paula Cossart, Jonas Gabrielsen, Jette Barnholdt Hansen, Kasper Møller Hansen, Sine Nørholm Just, Ildikó Kaposi, William Keith, Bart van Klink, Marie Lund Kluffeff, Manfred Kraus, Oliver W. Lembcke, Berit von der Lippe, James McDonald, Niels Møller Nielsen, Tatiana Tatarchevskiy, Italo Testa, Georgia Warnke, Kristian Wedberg, and Stephen West.

Evaluating the Language of Argument Martin Hinton 2020-11-30 This book is concerned with the evaluation of natural argumentative discourse, and, in particular, with the language in which arguments are expressed. It introduces a systematic procedure for the analysis and assessment of arguments, which is designed to be a practical tool, and may be considered a pseudo-algorithm for argument evaluation. The first half of the book lays the theoretical groundwork, with a thorough examination of both the nature of language and the nature of argument. This leads to a definition of argumentation as reasoning expressed within a procedure, which itself yields the three frames of analysis used in the evaluation procedure: Process, Reasoning, and Expression. The second half begins with a detailed discussion of the concept of fallacy, with particular attention on fallacies of language, their origin and their effects. A new way of looking at fallacies emerges from these chapters, and it is that conception, together with the understanding of the nature of argumentation described in earlier sections, which ultimately provides the support for the Comprehensive Assessment Procedure for Natural Argumentation. The first two levels of this innovative procedure are outlined, while the third, that dealing with language, and involving the development of an Informal Argument Semantics, is fully described. The use of the system, and its power of analysis, are illustrated through the evaluation of a variety of examples of argumentative texts.

Argumentation Strategies in the Classroom Chrysi Rapanta 2019-09-01 Argumentation as a teaching and learning method in the K-12 curriculum has received increasing attention across the globe. The reason for this is simple: argumentation helps students develop necessary critical thinking skills. However, teaching this method is not as straightforward as it may appear. Placing the classroom at the centre of the investigation, this book seeks to throw light onto argumentation as a teaching practice by asking: What does it take to teach as argument? What does it mean to be ‘argumentative’ teachers? And, how can we create classroom environments that will help and encourage young people to develop their argument skills? Based on first-hand experience and extensive research, this volume guides the reader through argumentation with the focus placed on the relationship between this teaching method and effective learning and the need to investigate the role of teachers in encouraging argumentation in the classroom. Although there are a considerable number of tools and techniques that promote argumentation in the K-12 classroom, many teachers struggle to successfully implement them in the classroom. Aimed at addressing this issue, this book endeavours to instruct teachers on how to apply argumentation effectively in their day-to-day classes and to clarify argumentation as a teaching and learning strategy. As an important contribution to the field of argumentation and education, this book will be of interest to researchers, post-graduate students, and secondary school teachers, alike.

Argument Types and Fallacies in Legal Argumentation Thomas Bustamante 2015-04-07 This book provides theoretical tools for evaluating the soundness of arguments in the context of legal argumentation. It deals with a number of general argument types and their particular use in legal argumentation. It provides detailed analyses of argument from authority, argument ad hominem, argument from ignorance, slippery slope argument and other general argument types. Each of these argument types can be used to construct arguments that are sound as well as arguments that are unsound. To evaluate an argument correctly one must be able to distinguish the sound instances of a certain argument type from its unsound instances. This book promotes the development of theoretical tools for this task.

Argumentation in Actual Practice Frans H. van Eemeren 2019-09-23 Argumentation in Actual Practice contains a collection of topical studies about argumentative discourse in context written by argumentation scholars from a diversity of academic backgrounds. Some contributions provide general perspectives, other contributions deal with specific issues, particular types of argumentative discourse or individual argumentative speech events. The contexts in which argumentation is examined vary from politics and the media to medical, juridical, educational, commercial or military contexts, a specific academic discipline, a special issue or pertain to all kinds of contextualised argumentative discourse. The issues discussed include the interpretation and analysis of argumentation, strategic manoeuvring, argument schemes, the stock issues, the fallacies, the principle of charity and the persuasiveness of argumentative discourse. A common feature is that they are all empirically-oriented and that virtually all of them are strongly concerned with an adequate understanding of contextualised argumentative discourse and the factors that may increase or decrease its reasonableness and effectiveness.

The Pragmatics of Cogent Argumentation in British and American Political Debates Waleed Ridha Hammoodi Al-Juwaid 2019-03-05 Since the time of Aristotle, various approaches have been offered to tackle what makes language stronger.

Some approaches have focused on rhetoric, while others have given attention to logic. Still others have concentrated on dialectics. This book takes into account a full-fledged comprehensive model of analysis that brings these three perspectives together. Throughout, it investigates the presence of pragmatic criteria and the utilization of pragmatic strategies that make language stronger in the context of argumentation. Cogent argumentation is a pragmatic communicative interactional process that goes through stages, and is regarded as a communicative exchange of arguments. The cogency of these arguments is attained according to the availability of pragmatic criteria and the utilization of pragmatic strategies, and determined throughout the whole process of argumentation. The book will be of interest to anyone interested in the fields of pragmatics, communication, and politics, and will widen their understanding of the pragmatic structure and criteria which constitute cogent argumentation.

**Inside Arguments** Henrique Jales Ribeiro 2012-04-25 This volume includes a collection of eighteen essays that provide a decisive input to the study of logic and argumentation theory by some of the finest specialists in these areas, covering the main schools of thought and contemporary trends at the beginning of the 21st century. In these essays, the authors clarify the status of what we currently call, ambiguously and problematically, "logic" and "argumentation theory", and discuss the no less controversial issue of the relationship between these two concepts when applied to the study of argumentation and its problems. At the same time, they take stock of the most recent developments of argumentation theory considered as an ongoing research subject. It is the first time in the last few decades that a work this comprehensive and up-to-date on such matters has been published. This volume is an essential tool for all of those interested in the study of the relations between logic and argumentation, particularly at the university level. It provides not only an introduction to these subjects, but also the necessary framework for further specialised research development in the future.

**The Relativity of Theory** Moti Mizrahi 2020-09-29 This book offers a close and rigorous examination of the arguments for and against scientific realism and introduces key positions in the scientific realism/antirealism debate, which is one of the central debates in contemporary philosophy of science. On the one hand, scientific realists argue that we have good reasons to believe that our best scientific theories are approximately true because, if they were not even approximately true, they would not be able to explain and predict natural phenomena with such impressive accuracy. On the other hand, antirealists argue that the success of science does not warrant belief in the approximate truth of our best scientific theories. This is because the history of science is a graveyard of theories that were once successful but were later discarded. The author eventually settles on a middle-ground position between scientific realism and antirealism called "relative realism".

**Multimodal Argumentation and Rhetoric in Media Genres** Assimakis Tseronis 2017-12-15 This collection advances the study of context-dependent characteristics of argumentative discourse by examining a variety of media genres in which text and image (and other semiotic modes) combine to create meaning. The chapters have been written by an international group of senior and junior scholars researching multimodal argumentation in the last two decades. In each chapter, a specific approach to argumentation and rhetoric is combined with insights from visual studies, metaphor theory, scientific visualization, cognitive science, semiotics, conversation analysis, or (documentary) film theory in order to explain how multimodal genres function argumentatively and rhetorically. Together the chapters present a state-of-the-art in the analysis of multimodal argumentation in such diverse genres as print advertisements, news photographs, scientific illustrations, political cartoons, documentaries, film trailers, political TV advertisements, public debates, and political speeches. The volume will be of interest to advanced students and scholars in argumentation studies, rhetoric, and multimodal communication.

**Reflections on Theoretical Issues in Argumentation Theory** Frans H. van Eemeren 2015-08-08 This volume presents a selection of papers reflecting key theoretical issues in argumentation theory. Its six sections are devoted to specific themes, including the analysis and evaluation of argumentation, argument schemes and the contextual embedding of argumentation. The section on general perspectives on argumentation discusses the trends of empiricalization, contextualization and formalization, offers descriptions of the analytical and evaluative tools of informal logic, and highlights selected principles that argumentation theorists do and do not agree upon. In turn, the section on linguistic approaches to argumentation focuses on the problem of distinguishing between explanation and argument, while also

elaborating on the role of verbal indicators of argument schemes. All essays included in this volume point out notable recent developments in the study of argumentation.

Fallacies in Medicine and Health Louise Cummings 2020-02-29 This textbook examines the ways in which arguments may be used and abused in medicine and health. The central claim is that a group of arguments known as the informal fallacies – including slippery slope arguments, fear appeal, and the argument from ignorance – undertake considerable work in medical and health contexts, and that they can in fact be rationally warranted ways of understanding complex topics, contrary to the views of many earlier philosophers and logicians. Modern medicine and healthcare require lay people to engage with increasingly complex decisions in areas such as immunization, lifestyle and dietary choices, and health screening. Many of the so-called fallacies of reasoning can also be viewed as cognitive heuristics or short-cuts which help individuals make decisions in these contexts. Using features such as learning objectives, case studies and end-of-unit questions, this textbook examines topical issues and debates in all areas of medicine and health, including antibiotic use and resistance, genetic engineering, euthanasia, addiction to prescription opioids, and the legalization of cannabis. It will be useful to students of critical thinking, reasoning, logic, argumentation, rhetoric, communication, health humanities, philosophy and linguistics.

PANDEMIC OF ARGUMENTATION Steve Oswald 2022 This open access book addresses communicative aspects of the current COVID-19 pandemic as well as the epidemic of misinformation from the perspective of argumentation theory. Argumentation theory is uniquely placed to understand and account for the challenges of public reason as expressed through argumentative discourse. The book thus focuses on the extent to which the forms, norms and functions of public argumentation have changed in the face of the COVID-19 pandemic. This question is investigated along the three main research lines of the COST Action project CA 17132: European network for Argumentation and Public PoLicY analysis (APPLY): descriptive, normative, and prescriptive. The volume offers a broad range of contributions which treat argumentative phenomena that are directly related to the changes in public discourse in the wake of the outburst of COVID-19. The volume additionally places particular emphasis on expert argumentation, given (i) the importance expert discourse has had over the last two years, and (ii) the challenges that expert argumentation has faced in the public sphere as a result of scientific uncertainty and widespread misinformation. Contributions are divided into three groups, which (i) examine various features and aspects of public and institutional discourse about the COVID-19 pandemic, (ii) scrutinize the way health policies have been discussed, debated, attacked and defended in the public sphere, and (iii)

consider a range of proposals meant to improve the quality of public discourse, and public deliberation in particular, in such a way that concrete proposals for argumentative literacy will be brought to light. Overall, this volume constitutes a timely inquiry into all things argumentative in pandemic discourse. This volume is of interest to a broad readership including philosophers, linguists, communication and legal scholars, and members of the wider public who seek to better understand the discourse surrounding communicative phenomena in times of crisis.

The Art of Failure Jesper Juul 2013-02-22 An exploration of why we play video games despite the fact that we are almost certain to feel unhappy when we fail at them. We may think of video games as being "fun," but in *The Art of Failure*, Jesper Juul claims that this is almost entirely mistaken. When we play video games, our facial expressions are rarely those of happiness or bliss. Instead, we frown, grimace, and shout in frustration as we lose, or die, or fail to advance to the next level. Humans may have a fundamental desire to succeed and feel competent, but game players choose to engage in an activity in which they are nearly certain to fail and feel incompetent. So why do we play video games even though they make us unhappy? Juul examines this paradox. In video games, as in tragic works of art, literature, theater, and cinema, it seems that we want to experience unpleasantness even if we also dislike it. Reader or audience reaction to tragedy is often explained as catharsis, as a purging of negative emotions. But, Juul points out, this doesn't seem to be the case for video game players. Games do not purge us of unpleasant emotions; they produce them in the first place. What, then, does failure in video game playing do? Juul argues that failure in a game is unique in that when you fail in a game, you (not a character) are in some way inadequate. Yet games also motivate us to play more, in order to escape that inadequacy, and the feeling of escaping failure (often by improving skills) is a central enjoyment of games. Games, writes Juul, are the art of failure: the singular art form that sets us up for failure and allows us to experience it and experiment with it. *The Art of Failure* is essential reading for anyone interested in video games, whether as entertainment, art, or education.

From Argument Schemes to Argumentative Relations in the Wild Frans H. van Eemeren 2019-10-23 This volume comprises a selection of contributions to the theorizing about argumentation that have been presented at the 9th conference of the International Society for the Study of Argumentation (ISSA), held in Amsterdam in July 2018. The chapters included provide a general theoretical perspective on central topics in argumentation theory, such as argument schemes and the fallacies. Some contributions concentrate on the treatment of the concept of conductive argument. Other contributions are dedicated to specific issues such as the justification of questions, the occurrence of mining relations, the role of exclamation, argumentative abduction, eudaimonistic argumentation and a typology of logical ways to counter an argument. In a number of cases the theoretical problems addressed are related to a specific type of context, such as the burden of proof in philosophical argumentation, the charge of committing a genetic fallacy in strategic manoeuvring in philosophy, the necessity of community argument, and connection adequacy for arguments with institutional warrants. The volume offers a great deal of diversity in its breadth of coverage of argumentation theory and wide geographic representation from North and South America to Europe and China.

Narration as Argument Paula Olmos 2017-05-09 This book presents reflections on the relationship between narratives and argumentative discourse. It focuses on their functional and structural similarities or dissimilarities, and offers diverse perspectives and conceptual tools for analyzing the narratives' potential power for justification, explanation and persuasion. Divided into two sections, the first Part, under the title "Narratives as Sources of Knowledge and Argument", includes five chapters addressing rather general, theoretical and characteristically philosophical issues related to the argumentative analysis and understanding of narratives. We may perceive here how scholars in Argumentation Theory have recently approached certain topics that have a close connection with mainstream discussions in epistemology and the cognitive sciences about the justificatory potential of narratives. The second Part, entitled "Argumentative Narratives in Context", brings us six more chapters that concentrate on either particular functions played by argumentatively-oriented narratives or particular practices that may benefit from the use of special kinds of narratives. Here the focus is either on the detailed analysis of contextualized examples of narratives with argumentative qualities or on the careful understanding of the particular demands of certain well-defined situated activities, as diverse as scientific theorizing or

war policing, that may be satisfied by certain uses of narrative discourse.
