Marketing Ethics & Society Lynne Eagle 2015-09-15 Marketing, while essential to organisational success, is arguably one of the most controversial aspects of business management. Criticisms of marketing's impact range from fostering materialism and unsustainable consumption patterns through to the use of deception, stifling of innovation and lowering of quality, to name but a few. Taking a holistic and international perspective, this book critically examines the ethical challenges marketing faces and explores strategies marketers can use to respond to those challenges. The book examines specific aspects of marketing activities, such as ethical considerations in relation to young consumers, potentially harmful products and criticism of the societal impact of medical, arts and tourism marketing activities. It then combines these with wider discussions of frameworks that enable marketers to respond to ethical challenges, supplemented by discussions of cross-cultural and international perspectives, consumer responses and ethical consumption movements as well as shifting historical perceptions of marketing ethics. The book is accompanied by a companion website including: PowerPoint slides and teaching notes per chapter, links to free SAGE journal articles and online videos selected per chapter by the authors, quizzes per chapter and links to further reading online. Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with

lessons that go down easy. You'll be laughing and learning at the same time.
