Where I Lived, and What I Lived For Henry Thoreau 2005-08-25 Throughout

history, some books have changed the world. They have transformed the way we see ourselves - and each other. They have inspired debate, dissent, war and revolution. They have enlightened, outraged, provoked and comforted. They have enriched lives - and destroyed them. Now Penguin brings you the works of the great thinkers, pioneers, radicals and visionaries whose ideas shook civilization and helped make us who we are. Thoreau's account of his solitary and self-sufficient home in the New England woods remains an inspiration to the environmental movement - a call to his fellow men to abandon their striving, materialistic existences of 'quiet desperation' for a simple life within their means, finding spiritual truth through awareness of the sheer beauty of their surroundings. Enlisting Madison Avenue Todd C. Helmus 2007-07-17 Virtually every action, message, and decision of a military force shapes the opinions of an indigenous population: strategic communication, treatment of civilians at vehicle checkpoints, and the accuracy or inaccuracy of aerial bombardment. Themes of U.S. goodwill mean little if its actions convey otherwise. Consequently, a unified message in both word and deed is fundamental to success. Business marketing practices provide a useful framework for improving U.S. military efforts to shape the attitudes and behaviors of local populations in a theater of operations as well as those of a broader, international audience. Enlisting Madison Avenue extracts lessons from these business practices and adapts them to U.S. military efforts, developing a

unique approach to shaping that has the potential to improve military-civilian relations, the accuracy of media coverage of operations, communication of U.S. and coalition objectives, and the reputation of U.S. forces in theater and internationally. Foremost among these lessons are the concepts of branding, customer satisfaction, and segmentation of the target audience, all of which serve to maximize the impact and improve the outcome of U.S. shaping efforts.

Frontier Orientalism and the Turkish Image in Central European Literature Charles D. Sabatos 2020-01-15 This comparative study analyzes the ways that Central European writers used stereotypes of the Turks to develop their national identities from the early modern period to the present. Charles D. Sabatos uses Andre Gingrich's concept of "frontier Orientalism" to foreground his analysis of Central European Orientalism, designating the nations of the former Habsburg Empire as the occident and the Turks as the oriental "Other." This study applies theoretical approaches to literary history—as developed by scholars such as Stephen Greenblatt and Linda Hutcheon—to a range of texts from the early modern period, the nineteenth-century national revivals, interwar independence, and the communist and postsocialist regimes. By following these depictions across literatures and over an extensive historical period, this study illustrates how the Turkish stereotype evolved from a menace to a more abstract yet still powerful metaphor of resistance, and finally to a mythical figure that evoked humor as often as fear.

Water Reuse Chris Binnie 2008-05-14 Water Reuse: An International Survey of current practice, issues and needs examines water reuse practices around the world from different perspectives. The objective is to show how differently wastewater reuse is conceived and practised around the world as well as to present the varied needs and possibilities for reusing wastewater. In the first section water reuse practices around the world are described for regions having common water availability, reuse needs and social aspects. The second section refers to the "stakeholders" point of view. Each reuse purpose demands different water quality, not only to protect health and the environment but also to fulfil the requirements of the specific reuse. Reuses considered are agricultural, urban agriculture as a special case of the former, municipal and industrial. Alongside these uses, the indirect reuse for human consumption through aquifer recharge is also discussed. The third section deals with emerging and controversial topics. Ethical and economical dilemmas in the field are presented as a subject not frequently addressed in this field. The role of governments in respect of public policy in reuse is discussed as well as the different international criteria and standards for reusing wastewater. The importance of public acceptance and the way to properly handle it is also considered. The fourth section of the book presents contrasting case studies; typical situations in the developed world (Japan and Germany) are compared to those in developing countries (Pakistan and Brazil) for agricultural and industrial reuse. Indirect planned reuse for human consumption (Germany) is compared with an unplanned one (Mexico). The Windhoek, Namibia case study is presented to emphasize why if the direct reuse of wastewater for human consumption has been performed with success for more than 35 years it is still the only example of this type around the world. To illustrate the difficulties of having a common framework for regulating water reuse in several countries, the Mediterranean situation is described. Other case studies presented refer to the reuse situation in Israel, Spain, Cameroon, Nepal and Vietnam, these latter countries being located in water rich areas. This book will be an invaluable information source for all those concerned with water reuse including water utility managers, wastewater policy makers and water resources planners as well as researchers and students in environmental engineering, water resources planning and sanitary engineering. *Boots on the Ground* John J. McGrath 2006 This paper clearly shows the immediate relevancy of historical study to current events. One of the most common criticisms of the U.S. plan to invade Iraq in 2003 is that too few troops were used. The argument often fails to satisfy anyone for there is no standard against which to judge. A figure of 20 troops per 1000 of the local population is often mentioned as the standard, but as McGrath shows, that figure was arrived at with some questionable assumptions. By analyzing seven military operations from the last 100 years, he arrives at an average number of military forces per 1000 of the population that have been employed in what would generally be considered successful military campaigns. He also points out a variety of important factors affecting those numbers-from geography to local forces employed to supplement soldiers on the battlefield, to the use of contractors-among others.
